

NOTICE – SOLAR POWER INSTALLATION
Warren Harding High School Replacement Project

September 26, 2016

The construction of the Warren Harding High School replacement project is well underway. Earthwork and environmental remediation are nearing completion, and the construction of the new school building is about to commence.

As part of the school construction project, electricity will be provided to the new school building from a proposed solar field to be constructed on the adjacent property to the north, owned by the General Electric Company (GE). Electricity derived from the photovoltaic modules in the solar field will be directed to the school building via underground electric service lines. The solar field is anticipated to provide all, or most, of the electricity needs of the new school building.
